# SmartGebeya

Connecting Buyers and Sellers
in One Continuous Marketplace.

# Problem Statement

In Ethiopia, many small businesses and individual sellers still depend on physical markets and informal social media platforms such as messaging groups to buy and sell products. These methods make it difficult for sellers to reach a wider audience and for buyers to find reliable products in one trusted place. Information about prices, product availability, and seller credibility is often unclear or scattered across multiple platforms.

Small merchants, students, and local entrepreneurs are especially affected because they lack access to affordable digital marketplace tools that help them promote products and manage sales efficiently. Buyers also face challenges such as wasted time searching for items, limited product comparison, and unsafe or unverified transactions.

As a result, local trade remains inefficient, less transparent, and restricted to physical locations, limiting business growth and convenient access to goods.

# Brief User Persona

Our target user is Abel, a 25-year-old small business owner in Addis Ababa who sells electronics and accessories. He wants to reach more customers beyond his local area but struggles to promote his products effectively using informal social media platforms. Abel needs a simple and reliable mobile marketplace to showcase products, connect with buyers, and manage sales easily.

# Proposed Solution

TradeLoop (GebeyaLoop) is a mobile marketplace application designed to digitize local trading by providing a centralized platform where buyers and sellers can connect easily. The application allows sellers to create product listings with descriptions, prices, and images, while buyers can browse, search, and discover products in one organized and trusted environment.

The core concept of the app is to simplify and modernize traditional marketplace interactions through mobile technology. By enabling direct communication between buyers and sellers and providing structured product information, TradeLoop helps users save time, expand business reach, and conduct transactions more efficiently. For users like Abel, the app provides an affordable digital storefront that increases visibility and improves sales opportunities without requiring advanced technical skills.

# Core Features

1. User Registration & Login
2. Product Listing
3. Product Browsing & Search
4. User Profiles
5. Buyer–Seller Communication

# Team Members and Their Roles

| Members | ID | Role |
|---|---|---|
| Yeabsira Tamirat | 3848/16 | Core Logic & Services Lead |
| Dereje Degefu | 1808/16 | Network & API Lead |
| Henok Beyene | 2394/16 | Database & State Lead |
| Endalew Gedefaw | 1961/16 | DevOps & Testing Lead |
| Abraham Ayssa | 0050/15 | Core Logic & Services Lead |
| Maya Elias | 2805/16 | UI/UX Implementation Lead |

# The End

Thank You
